

## SUPPLEMENTARY MATERIALS

**Table 1: Cases of congenital toxoplasmosis in England and Wales in 2017 (E. Guy, personal communication)**

Diagnosis of congenital toxoplasmosis	Pathology	Number of cases
<i>Confirmed</i>	Fetal death	3
	CNS disease	4
	Ocular disease	1
	Generalised systemic symptoms	2
	<i>Total</i>	10
<i>Unconfirmed*</i>	Fetal death	8
	Polyhydramnios	4
	Fetal abnormality	5
	<i>Total</i>	17

\* Unconfirmed cases are those cases where maternal infection is acquired (or strongly suspected) after conception, but no follow-up testing of the fetus or neonate is possible or has yet been undertaken. This further underlines the difficulty in achieving accurate estimates of incidence.
